

ABSTRACT

TELECOMMUNICATIONS SYSTEMS

5 A method is disclosed for controlling data flow in a  
telecommunications network in which a base station  
communicates with a mobile station using a plurality of  
packet data flows, the packet data flows having  
10 respective data flow rates. The method comprises  
controlling data flow through the network by  
controlling the data flow rate of each packet data  
flow, an overall data flow rate to the mobile station  
and a data flow rate for each base station.
